

# What to Know About Mold

## Mold is Dangerous

Exposure to mold can lead to respiratory problems, skin irritation, headaches, fatigue, allergies and asthma attacks. Mold infestations can also destroy furniture, carpet, and structural elements like wood and drywall.

## Mold is Preventable

Mold thrives in moist environments so prevent it by inspecting gutters and downspouts, quickly addressing leaky appliances, maintaining proper ventilation, and using a dehumidifier in areas with high humidity.

## Mold is Treatable

Mold should be handled by trained professionals. If you are a homeowner and suspect mold, contact a local expert to test for and treat the mold. Tenants should contact your property manager immediately.
